EDUCATION

University of Waterloo

Bachelor of Computer Science, Co-op | 89% average

Waterloo, ON

Sep 2025 – Apr 2030

EXPERIENCE

Software Developer Intern

Generis Group

May 2026 – Aug 2026

Toronto, ON

- Built a Next.js/Prisma reporting platform with employee and reviewer roles for a 30-person B2B events team.
- Integrated Jira, HubSpot, and Google Workspace (Calendar, Tasks, Gmail, Chat), using Gemini to extract work items from emails and chats and generate daily summaries.
- Developed a WordPress automation system that converts written requests into reviewable plans, applies approved changes with rollback, and verifies rendered pages.
- Designed an LLM parser that extracts structured actions, targets, and values; the backend resolves the corresponding WordPress records and fields.

Software Developer Intern

QuickBite Collective

Jun 2025 – Aug 2025

Markham, ON

- Built a Toast POS reporting dashboard with Next.js, NestJS, and PostgreSQL for 2 brands and 40 restaurants, replacing manual exports with live reporting.
- Engineered a Toast ingestion pipeline using webhooks, BullMQ, backfills, and catch-up syncs; processed and normalized 41M+ order records with automated completeness checks.
- Designed idempotent sync jobs with deduplication, lease locks, and cursors that advance only after successful runs.

PROJECTS

Derive AI: Math Workspace | React, TypeScript, Express, MongoDB

CXC AI Hackathon 2026

- Built a pressure-aware canvas whiteboard with ink smoothing, selection and group transforms, shape tools, pan/zoom, and undo/redo history.
- Integrated AI models through OpenRouter to recognize handwritten math, solve problems, graph results, check work, and suggest next steps from selected strokes or images.
- Implemented Auth0-protected notes/chat APIs with bulk sync, indexed per-user storage, user-isolation tests, and streaming Gemini responses.

Planet Sim: 3D Physics Engine | C++20, OpenGL, CMake, GLSL

- Developed a rigid-body engine with velocity-Verlet integration, adaptive substepping, gravity, friction, restitution, and continuous collision detection.
- Built an instanced renderer with shadows, HDR compositing, bloom, fog, and procedural materials.
- Designed focus/orbit camera controls, a minimap, path trails, persistent settings, and key rebinding; added tests across physics, rendering, camera, and UI.

Study Planner: Multi-Agent Exam Scheduler | Python, Google ADK, Gemini

- Built a four-agent pipeline that assigns PDFs to courses, extracts topics, and estimates per-topic workload.
- Generated feasible daily exam schedules around deadlines and workload limits, with CSV/Markdown export.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, C, C++, Java, SQL

Frontend: React, Next.js, Tailwind CSS, TanStack Query

Backend: Node.js, Express, NestJS, Prisma, PostgreSQL, MongoDB, Redis

AI/LLM: Gemini, OpenRouter, Google ADK, OpenAI API

Testing: Jest, Vitest, Playwright, React Testing Library

Tools: Git/GitHub, GitHub Actions, Docker, Linux/Bash, Vercel, Supabase, Jira
